# Cumberland Poultry Slat .....

... the only pure plastic flooring

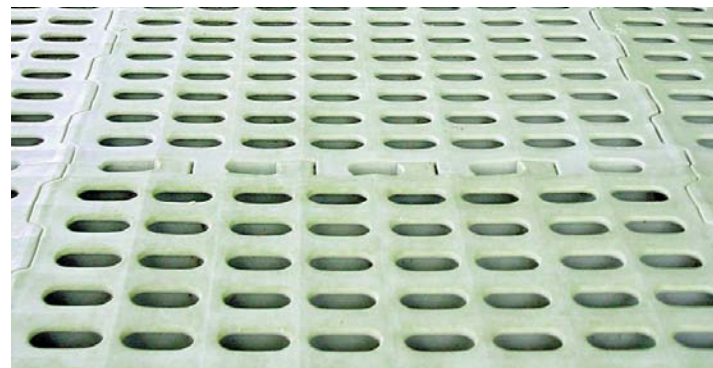

Cumberland Poultry Slats are specially designed for Broiler and Breeder birds. Made from virgin high impact Polypropylene plastic. The special construction of the slat provides comfortable environment for birds. The Slat is designed for ease of assembly and removal. The non-slip, non-abrasive surface provides both a resilient and secure product.

Cumberland Full Slat

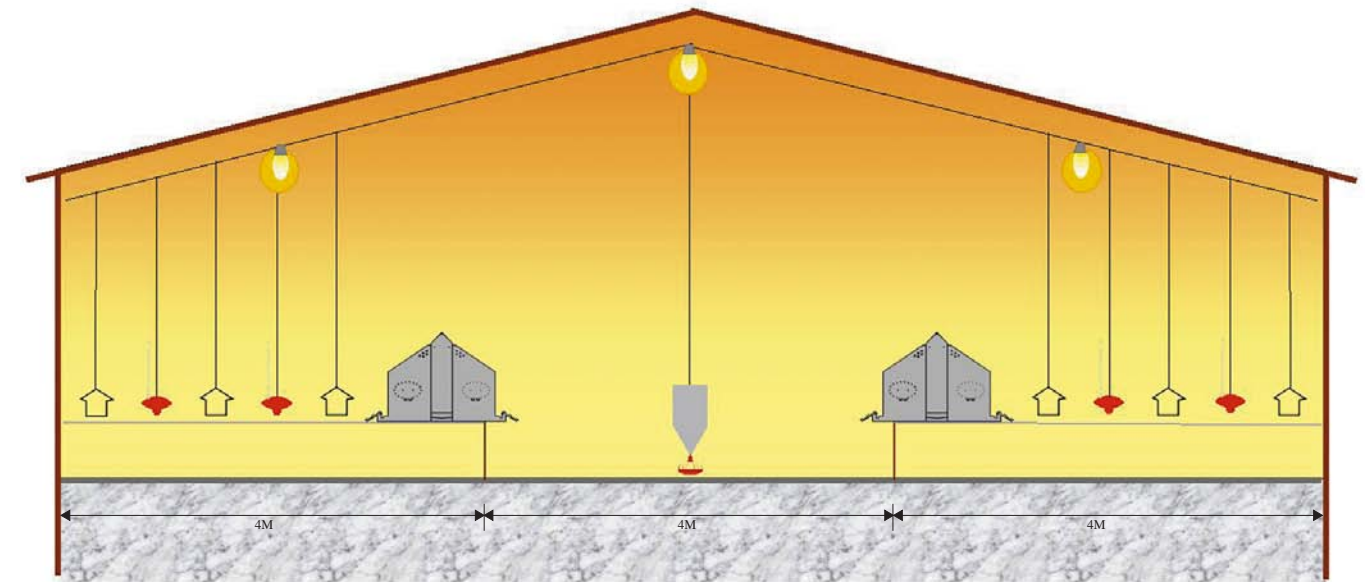

## Interlocking System

Cumberland has devised a unique interlocking system to create a strong end-to-end joint. This interlocking system along with a self supporting construction system allows the slats to be quickly and securely installed, removed easily and individually for cleaning

## Floor Supports

Using the same unequaled painting process as our gating products, Cumberland's steel flooring supports surpasses any in the industry in terms of longevity. The slat design can also be placed on a wooden framework

Slat in Breeder House

## Profile Surface

An ideal floor design. A surface profile with a "sloped" hole design and larger openings, allows manure (foreign matter) to pass easily through while preventing unwanted accumulations. Washing becomes simpler and the floor cleaner with less work

## Comfort and Hygiene

The Cumberland floor system creates an ideal environment adapted to suit many types of birds with ultimate comfort for the bird and ultimate ease of maintenance for the farm manager.
